

Column Sentry®

FIT System

Adjustable.
Expandable.
Interchangeable.
It FITS.

Always on guard

Adjustable

Each of the Column Sentry FIT pieces slides along a patented interactive spine, connecting with its neighboring pieces, assuring not only adjustability, but spreading impact absorption among several pieces. This allows equal protection all around the column. The FIT small and medium expand or contract to fit a multitude of column sizes between 4" and 12" square.

Column Sentry FIT Small
4" x 4" to 8" x 8"

Column Sentry FIT Medium
8" x 8" to 12" x 12"

Extension Pieces and Straps
10" wide (each)

Expandable

The new Column Sentry FIT extension pieces extend the reach of any side of the column. Built with the same interactive spine as the corner pieces, these energy-absorbent molded pieces can be added to each other to cover large, larger and even the largest column sizes.

Interchangeable

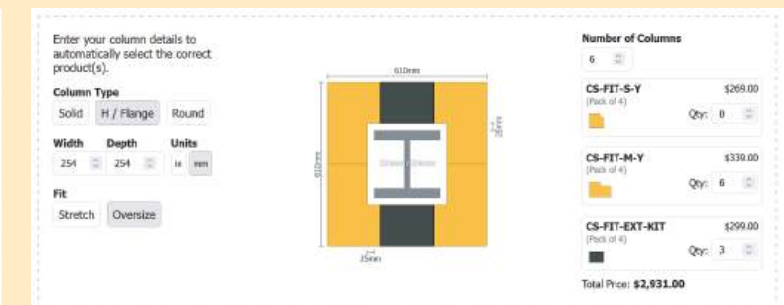

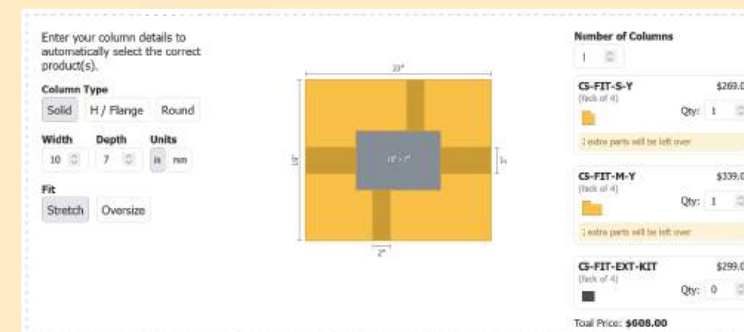

The newly redesigned Column Sentry FIT Medium now interacts with the original Column Sentry FIT Small, to cover rectangular sized columns beginning at 4" x 8". Sliding adjustability, plus expandability using extensions, means that with only these three parts, nearly any sized column can be covered with a layer of superior protection.

Setting the new standard for column protection

Today's distribution centers and warehouses have grown in size and scale with large stretches of floor space becoming more valuable than ever. To meet this demand, these buildings contain fewer columns that are much larger than standard structural columns. As a leader in manufacturing impact-resistant and collision warning products, Sentry® has developed the Column Sentry FIT System, an innovative solution that expands possibilities for column protection and assures that building owners can protect columns of every shape and size.

Configurable

With the almost infinite number of sizes available with this system, we've created a tool that will show you exactly how to create the column protector you need. Simply plug in the column size and shape, and the Configurator will build your column protector, showing which pieces are needed and how many. It's super easy to create the exact-sized column protector you need.

It FITS

When the column that needs protecting doesn't fit a standard column protector, the Column Sentry FIT System is the answer.
